Allowable Subject Matter

The following is an examiner's statement of reasons for allowance: the closest prior art of record are Maggioni (US 4,146,582) and Kornblum et al (JACS, 1959). Maggioni teaches the preparation of aromatic aldehydes and ketones by oxidizing an aromatic compound using persulfate as oxidizing agent and a metal salt as catalyst. Kornblum et al teach the conversion of alkyl halides and alkyl tosylates to aldehydes by way of an oxidation reaction; dimethylsulfoxide is used oxidizing agent; however, the only metal mentioned is silver tosylate. There is no teaching or fair suggestion in the closest prior art of record that would have lead one of ordinary skill in the art to either include a sulfoxide in the process taught by Maggioni, and adjust the concentration of the metal salts therein such that the sulfoxide itself acts as a catalyst, or to substitute the silver tosylate catalyst with the metal salts employed by Maggioni, and then adjusting the reaction conditions so that the sulfoxide acts as catalyst. Since the requisite motivation to modify the reference teachings is not apparent, the instant claims are found allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
